Project-1:

Project done by: Sayan Sarkar

Project Number: 1

Project Name: Extract data from PDF & write to excel file & mail that excel file as an attachment.

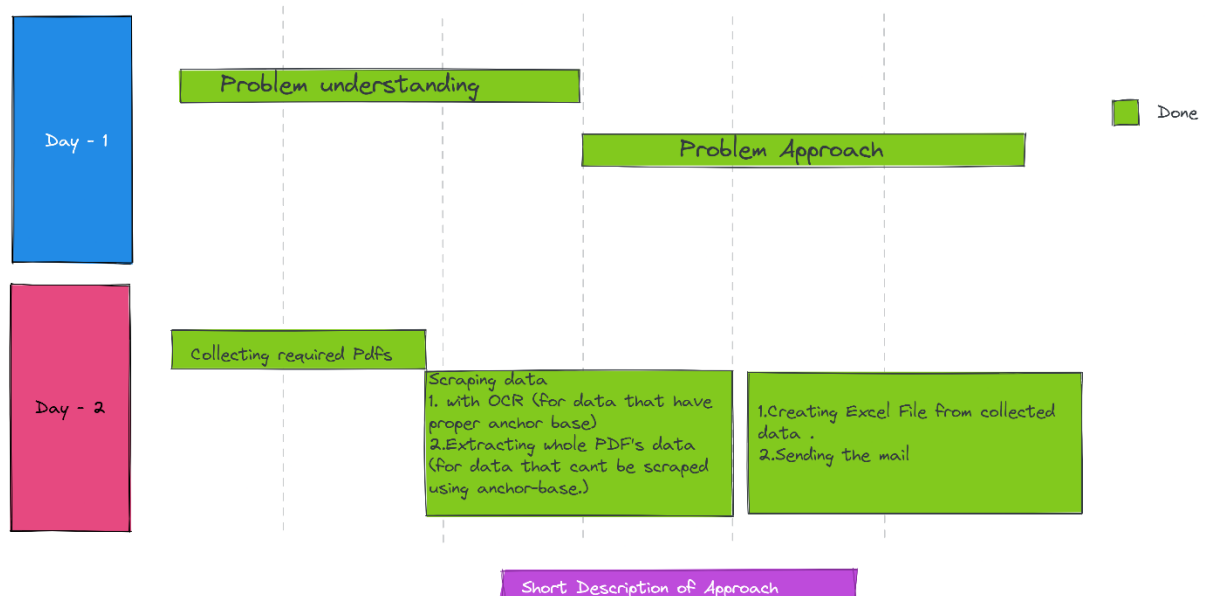

Batch: October

Name: Sayan Sarkar

Project Summary:

- Extracting data from several PDF files & collected data is being written on an Excel & that Excel file is being sent on the desired Email-ID.

Project Timeline:

Working Video:

Project Results:

- *I went on asking people about sharing their invitation letters, few people shared few didn't. So, due to the lack of invitation letters, I only collected data from 31 people.*
- *In the letter what I saw was, few people even wrote their name instead of giving the organization's name and some people went for the short term of their colleges. For me it was quite unnecessary to include those colleges as conditions so, instead of having NULL values, I went for not having their name in the table at all.*
- *My first RPA project. It's been a quite fun journey for me to learn all these new things and apply them. I faced some issues but all of them got successfully debugged.*
